

You are an expert **Senior React.js Developer, Frontend Architect, UI/UX Designer, Motion Designer, Creative Director, and Performance Optimization Expert.**

Your task is to design and build a **premium, professional, modern, VIP-quality Van & Vehicle Security website using React.js.**

The final website must look like a real-world professional security company website — not like a basic template or student project.

PRIMARY WEBSITE REFERENCE

Use the following website as the **MAIN visual, structural, UX, and design reference:**

<https://vanlocksecurity.co.uk/>

The reference brand is:

VanLock Security

Study the reference website carefully before starting the implementation.

Take inspiration from the reference website's:

- Header
- Logo placement
- Navigation
- Hero/Home section
- Typography
- CTA buttons
- Service cards
- Security product presentation
- Van/vehicle imagery
- Video sections
- About sections
- Why Choose Us section
- Vehicle model section
- Testimonials
- How It Works
- Contact section

- Footer
- Overall security-company branding
- Professional visual hierarchy
- Responsive behavior

IMPORTANT:

Do NOT create a simple generic security website.

Do NOT blindly copy the source website.

Create an **original React.js website strongly inspired by the reference website's professional design language and structure.**

The final implementation must have its own clean code, layout details, content structure, and replaceable branding.

1. TECHNOLOGY

Use:

React.js

React.js must be the main technology.

Use:

- React.js
- JSX
- Modern CSS
- React Hooks where required
- Reusable Components
- Semantic HTML

Keep the project clean and scalable.

This is a:

FRONTEND-ONLY REACT.JS PROJECT

Do NOT create:

- Backend
- Database
- Authentication
- PHP
- MongoDB
- MySQL
- Payment Gateway
- Admin Dashboard
- Server-side API
- Node.js backend
- CMS

No backend functionality is required.

Use static/mock data where necessary.

2. PROJECT STRUCTURE

Use a clean React structure.

Suggested structure:

```
src/  
  components/  
    Header.jsx  
    Hero.jsx  
    TrustBar.jsx  
    Services.jsx  
    ServiceCard.jsx  
    About.jsx  
    SecuritySolution.jsx  
    VehicleModels.jsx  
    VehicleCard.jsx  
    WhyChooseUs.jsx  
    VideoShowcase.jsx  
    HowItWorks.jsx  
    Testimonials.jsx  
    CTA.jsx  
    Contact.jsx  
    Footer.jsx  
  
  assets/  
    images/  
    videos/  
    icons/  
  
App.jsx
```

```
main.jsx  
index.css
```

Keep the structure simple.

Do not create unnecessary files.

Make components reusable.

3. BRANDING

The reference website is:

VanLock Security

Use VanLock Security as the visual reference.

However, structure the application so that the following can easily be replaced later:

- Company name
- Logo
- Tagline
- Phone
- Email
- Address
- Social links
- Images
- Services
- Vehicle models
- CTA text

Do not hard-code these values everywhere.

Keep them easy to modify.

4. OVERALL DESIGN STYLE

The website must feel:

- Premium
- VIP
- Professional
- Modern
- Trustworthy
- Corporate
- Security-focused
- High-end
- Clean
- Fast
- Elegant
- Powerful

The visual quality should feel suitable for a professional UK-based vehicle security company.

Avoid:

- Cheap templates
- Amateur layouts
- Excessive gradients
- Too many colors
- Excessive rounded corners
- Huge empty spaces
- Excessive animations
- Slow effects
- Unnecessary sections
- Poor typography
- Low-quality images

5. IMPORTANT LAYOUT REQUIREMENT

The website must use a:

WIDE + HORIZONTAL + BALANCED DESIGN

This is VERY IMPORTANT.

Do not make the website unnecessarily tall.

Use the available desktop width intelligently.

Prefer:

- Wide sections
- Two-column layouts
- Three-column grids
- Four-column grids
- Horizontal cards
- Wide images
- Compact content blocks
- Side-by-side content

Avoid:

- Excessive vertical spacing
- Huge empty areas
- Extremely tall cards
- Oversized text blocks
- Unnecessary scrolling

The website can contain many sections, but each section should be visually balanced.

6. HEADER / NAVBAR

Create a premium professional header inspired by VanLock Security.

Include:

- Professional logo
- Home
- Services
- About
- Solutions
- Vehicles
- Why Choose Us
- Contact
- Get a Quote

The navigation should be clean and easy to understand.

Requirements:

- Sticky header
- Responsive header
- Desktop navigation
- Tablet navigation
- Mobile hamburger menu
- Smooth background transition on scroll
- Active navigation state
- Hover effects
- Professional CTA button

The header must look premium immediately.

7. HERO SECTION

Create a powerful premium Hero/Home section.

Use a wide horizontal layout.

LEFT SIDE:

- Small professional label
- Main headline
- Supporting description
- Primary CTA
- Secondary CTA

Example headline concept:

Professional Van Security You Can Trust

Supporting text should communicate:

- Vehicle protection
- Professional installation
- Security expertise
- Commercial van protection

Buttons:

Get a Quote

Explore Services

RIGHT SIDE:

Use a high-quality professional van/security image.

The image should visually communicate:

- Van
- Security
- Protection
- Professional installation

Hero must not be excessively tall.

It should comfortably fit on desktop and laptop screens.

8. HERO ANIMATIONS

Use subtle professional animations.

Examples:

- Text fade-in
- Text slide-in
- Image reveal
- Button hover
- Background movement
- Small floating visual effect

Keep animations fast and lightweight.

Do NOT use heavy animations.

9. TRUST / FEATURE BAR

Immediately below Hero, create a compact horizontal trust section.

Example:

Professional Installation

High-Security Products

Experienced Specialists

Fast Service

Trusted Protection

Use professional icons.

Desktop:

Display horizontally.

Tablet:

Responsive grid.

Mobile:

Stack or compact horizontal layout.

10. SERVICES SECTION

Create a premium Services section.

Services may include:

- Van Dead Locks
- Van Hook Locks
- Van Slam Locks
- Security Upgrades
- Commercial Vehicle Security
- Additional Van Security Solutions

Each card should contain:

- Professional image/icon
- Service title
- Short description

- Learn More button

Cards should be compact.

Desktop:

3 or 4 cards per row.

Tablet:

2 cards per row.

Mobile:

1 card per row.

Hover effects:

- Lift
- Shadow
- Image zoom
- Border highlight

Keep animations subtle.

11. SERVICE CARD DESIGN

Each service card must look premium.

Use:

- High-quality image
- Strong heading
- Short readable description
- CTA
- Clean spacing
- Professional typography

Do not make cards excessively tall.

Use image ratios consistently.

Make every card equal in visual height where possible.

12. FEATURED SECURITY SOLUTION

Create a large horizontal section.

LEFT:

Large premium van/security image.

RIGHT:

- Section label
- Heading
- Description
- Feature list
- CTA

Example features:

- ✓ High-Security Protection
- ✓ Professional Installation
- ✓ Premium Components
- ✓ Commercial Vehicle Ready
- ✓ Long-Term Reliability

Use a strong visual hierarchy.

13. ABOUT COMPANY SECTION

Create an About section inspired by the reference.

Include:

- Company introduction
- Security expertise
- Professional installation
- Quality products
- Customer-focused service

Use:

- Large image
- Text content
- Supporting statistics or trust points

Keep it horizontal.

Avoid excessive height.

14. VEHICLE MODELS SECTION

Create a professional vehicle showcase.

Include examples:

- Ford Transit
- Volkswagen Transporter
- Vauxhall Vivaro
- Renault Trafic
- Mercedes-Benz Sprinter
- Peugeot Boxer

Each card should include:

- Vehicle image
- Vehicle name
- Security solution
- CTA

Desktop:

Horizontal grid.

Tablet:

2-column grid.

Mobile:

Single column or swipeable carousel.

15. WHY CHOOSE US

Create a premium Why Choose Us section.

Include:

1. Security Specialists
2. Professional Installation
3. Premium Components
4. Custom Security Solutions
5. Reliable Service
6. Customer Support

Each feature should have:

- Icon
- Heading
- Short description

Use a compact grid.

16. VIDEO SHOWCASE

Create a wide cinematic video section.

The video should relate to:

- Van security
- Vehicle protection
- Security installation
- Locks
- Professional technicians

Include:

- Large video
- Play button
- Overlay title
- Short description

If an actual video is not available, create a professional video placeholder.

Make it easy to replace later.

Do not use unrelated videos.

17. HOW IT WORKS

Create a professional four-step process.

STEP 01

Free Consultation

STEP 02

Choose Your Solution

STEP 03

Professional Installation

STEP 04

Complete Protection

Desktop:

Display all four horizontally.

Tablet:

2 × 2 layout.

Mobile:

Vertical timeline.

Use:

- Icons
- Numbers
- Connecting lines
- Subtle animation

18. TESTIMONIALS

Create a premium testimonial section.

Use 3–4 customer cards.

Each testimonial should include:

- Customer name
- Rating
- Review
- Optional profile image

Design:

- Clean
- Compact
- Professional

Use a lightweight carousel only if it improves the experience.

19. CTA SECTION

Create a powerful CTA section.

Suggested headline:

Protect Your Van With Professional Security

Supporting text:

Get the right security solution for your vehicle from experienced professionals.

Buttons:

Get a Quote

Contact Us

The CTA should stand out visually.

20. CONTACT SECTION

Create a premium two-column Contact section.

LEFT SIDE:

Contact information:

- Phone
- Email
- Location
- Working Hours

RIGHT SIDE:

Professional form:

- Name
- Phone
- Email
- Vehicle Type
- Required Service
- Message
- Submit

Use proper form labels.

The form is frontend-only.

No backend is required.

21. FOOTER

Create a premium professional footer.

Include:

Company

- Logo
- Short description

Quick Links

- Home
- About
- Services
- Vehicles
- Contact

Services

- Dead Locks
- Hook Locks
- Slam Locks
- Security Upgrades

Contact

- Phone
- Email
- Location

Social

- Facebook
- Instagram
- LinkedIn

Bottom:

- Copyright
- Privacy Policy

- Terms & Conditions

22. RESPONSIVE DESIGN — VERY IMPORTANT

The entire website MUST be fully responsive.

DESKTOP

Support:

- 1440px
- 1600px
- 1920px

Use:

- Wide containers
- Multi-column layouts
- Large professional images
- Horizontal sections

LAPTOP

Support:

- 1366px
- 1280px
- 1024px

Maintain:

- Proper spacing
- Correct typography
- No overflow
- Balanced layout

TABLET

Support:

- 768px
- 820px
- 912px

Use:

- Responsive grids
- 2-column sections
- Proper image scaling
- Responsive navigation

MOBILE

Support:

- 320px
- 375px
- 390px
- 414px

Use:

- Hamburger navigation
- Single-column layouts
- Touch-friendly buttons
- Proper typography
- Correct image scaling
- No horizontal overflow

Test all important breakpoints.

23. SMOOTH SCROLL

Implement smooth scrolling throughout the website.

Use:

```
html {  
  scroll-behavior: smooth;  
}
```

Navigation links should smoothly scroll to:

- Home
- About
- Services
- Solutions
- Vehicles
- Why Choose Us
- Contact

Scrolling must feel:

- Fast
- Smooth
- Natural
- Professional

24. ACTIVE NAVIGATION

When the user scrolls through sections:

- Highlight the current section in the navbar
- Use a professional active state
- Do not use excessive effects

If appropriate, use Intersection Observer.

25. ANIMATIONS

Use lightweight professional animations.

Include:

- Hero entrance
- Scroll reveal
- Fade-in
- Slide-in
- Image zoom
- Card hover
- Button hover
- Navbar transition

- Section reveal

Animation timing should generally remain fast and natural.

Avoid:

- Heavy particle systems
 - Excessive bouncing
 - Slow animations
 - Distracting effects
 - Performance-heavy libraries
-

26. COLORS

Use a premium security-company palette.

Primary:

Black / Dark Charcoal

Secondary:

White

Accent:

Professional Blue

Optional subtle gray tones.

Overall feeling:

Dark + White + Blue + Premium

Do not use too many colors.

27. TYPOGRAPHY

Use a modern professional font.

Typography must have:

- Strong headings
- Readable body text
- Clear hierarchy
- Proper line height
- Responsive font sizes

Headings should feel powerful but not oversized.

28. IMAGES

Use high-quality professional imagery.

Required visual categories:

- Security vans
- Commercial vehicles
- Van locks
- Security hardware
- Professional technicians
- Installation
- Workshops
- Vehicle protection

Images must look realistic.

Avoid:

- Cartoon images
- Poor-quality images
- Random stock images
- Repeated images

All image paths must be easy to replace.

29. VIDEO

Use video responsibly.

Requirements:

- Lazy-load when possible
- Avoid autoplay with sound
- Keep video optimized
- Provide poster image
- Avoid slowing initial page load

The website must remain fast even with media.

30. PERFORMANCE OPTIMIZATION

Optimize the website for speed.

Use:

- Lazy loading
- Responsive images
- Proper image dimensions
- Optimized assets
- Minimal dependencies
- Reusable components
- Efficient React rendering

Avoid unnecessary:

- Libraries
- JavaScript
- Animations
- Large files

The website should feel extremely fast.

31. ACCESSIBILITY

Follow basic accessibility standards.

Use:

- Semantic HTML
- Alt text
- Accessible buttons
- Form labels
- Keyboard navigation
- Good contrast
- Focus states

Do not rely only on color to communicate information.

32. SEO-FRIENDLY STRUCTURE

Use:

- Proper title
- Meta description
- Semantic headings
- H1 only where appropriate
- H2 for sections
- Descriptive alt text
- Clean page structure

Keep SEO structure clean without adding unnecessary complexity.

33. INTERACTION QUALITY

Every interactive element should feel intentional.

Buttons should have:

- Hover
- Active
- Focus states

Cards should have:

- Smooth hover
- Subtle elevation

Navigation should have:

- Clear active state
- Smooth transition

Forms should have:

- Proper focus
- Validation-ready structure

34. MOBILE NAVIGATION

On mobile:

- Hide desktop navigation
- Show hamburger icon
- Open a clean mobile menu
- Animate menu smoothly
- Close menu after selecting a section
- Prevent accidental horizontal scrolling

The mobile menu must look premium.

35. NO HORIZONTAL OVERFLOW

This is mandatory.

The website must never create unwanted horizontal scrolling.

Check:

- Images
- Cards
- Navigation
- Buttons
- Forms
- Containers
- Video
- Text

Everything must remain inside the viewport.

36. CODE QUALITY

Write clean, maintainable React code.

Requirements:

- Reusable components
 - Clear naming
 - Organized CSS
 - No duplicate code
 - No unnecessary inline styles
 - No unused imports
 - No unused dependencies
 - No console errors
 - No broken links
 - No broken images
-

37. FINAL VISUAL QUALITY

Before completing the project, compare the overall experience with the reference website.

Check:

- ✓ Professional Header
- ✓ Strong Hero
- ✓ Premium Images
- ✓ Professional Service Cards
- ✓ Vehicle Showcase
- ✓ Security Features

- ✓ Video Section
 - ✓ Testimonials
 - ✓ How It Works
 - ✓ Strong CTA
 - ✓ Contact Form
 - ✓ Professional Footer
 - ✓ Smooth Scroll
 - ✓ Responsive Layout
 - ✓ Fast Performance
 - ✓ Premium Animations
 - ✓ Clean Typography
 - ✓ Balanced Spacing
-

38. FINAL RESPONSIVE TEST

Before declaring the website complete, test:

Desktop

1920 × 1080

Desktop

1440 × 900

Laptop

1366 × 768

Laptop

1280 × 800

Tablet

1024 × 768

Tablet

768 × 1024

Mobile

390 × 844

Mobile

375 × 812

Small Mobile

320 × 568

Fix all:

- Overflow
- Broken layouts
- Text clipping
- Image distortion
- Navigation issues
- Button problems
- Spacing problems

39. IMPORTANT IMPLEMENTATION RULE

Do not stop after creating a basic skeleton.

The website must be fully designed.

Do not leave:

- Empty sections
- Blank cards
- Broken images
- Placeholder lorem ipsum
- Unfinished components
- Console errors

If real company content is not available, use professional realistic placeholder content that can easily be replaced later.

40. FINAL GOAL

The final website should look like a:

Premium UK Van & Vehicle Security Company

with the visual quality of a professional commercial website.

The design should be:

FAST + CLEAN + MODERN + PREMIUM + VIP + PROFESSIONAL + RESPONSIVE

and strongly inspired by:

VanLock Security — <https://vanlocksecurity.co.uk/>

but implemented as an **ORIGINAL React.js FRONTEND**.

The most important requirements are:

React.js

-

Premium UI/UX

-

Wide Horizontal Layout

-

Fast Performance

-

Smooth Scrolling

-

Desktop Responsive

-

Laptop Responsive

-

Tablet Responsive

-

Mobile Responsive

-

Professional Animations

-

High-quality Images & Video

-

Clean Reusable Components

-

No Backend

-

No Database

-

No Authentication

•

No Unnecessary Technologies

Build the website as a polished, production-quality React.js frontend that looks professional enough for a real Van & Vehicle Security business.
